

Critiques: Responsive design

Responsive design is the idea that **mobile and desktop readers deserve different experiences**, so you design to suit *both* audiences.

You can preview the mobile view by resizing your window, or using Chrome's **Developer Tools** by selecting **View > Developer > Developer Tools** and then clicking the icon that looks something like this: 

Instructions

Within your group, evaluate the visuals along the normal lines, while also asking **what changes are made between mobile and desktop**, and **what does that mean** is being stressed or not stressed?
